

One page for a Copper Sovereign Liberty Coin

About Economy - purposing an economic plan for restoring liberty into the economy. Discover the right of representation in the monetary system. After reading I encourage comments. Use the comments section at the bottom of the page.

**IN GOD WE TRUST** Here one page highlights the lack of a monetary system and purposes a solution which is compatible with American Law. This is an informative discovery for those who are not aware of the problem declared in my Journal of Congress of America.

I wrote solid definitions for terms used and titled them American English. American English is used where the definitions comply with American Law or unique to America.

I find all of the information I have and tell can be formed into a scholarly class and much can be learned from experience. The points I make tend to have intricate inter-dependency with related subject matter. If it were formed into a class it may be hard to categorise it into a single subject. Maybe Constitutional Law this page focuses on currency and economy but is an expanding explanation of default of contract found declared in JCOA containing necessary background info and current events, an examination of the facts, the way it is and as such this information is also banking and economy subject matter. Money is only part of an economy explaining it is part of law, language, and America it's all interdependant.

**For a Copper Sovereign Liberty Coin** Here's the gist. If you have read America's denunciation of the Federal Reserve Note you are aware of the economic tensions

which choke the life and joy from free people. The revealed good news is that the denunciation means that Fed. notes had value only by the fiat of the users Sovereign Right (You may be interested in my clear depiction of the mechanics of how the Fed. note defaults to Sovereign Right I had made a pictograph) this right to exchange which is self-evident and preexisting any construct of currency.

The gist of my construct is exchange by barter, ledger, or copper. Copper has been thought to be nearly valueless such an estimation doesn't matter because in this Sovereign construct it only serves as a physical object of exchange; a token if you will (token ring networks). It is not needed though may be used. Without copper a ledger is used or an accounting system. The copper only need be used where there is no accountant or accounting cannot be trusted because when coin is used the copper accounts intrinsically for the exchange. It is real money because it has the value in and of itself. When an accounting is used there is a ledger a document of some sort exchanging. And at the core it is all barter a direct exchange of (perceived) goods. When barter happens there is no need for either ledger or coin; both ledger and coin exist only to facilitate at the core of an exchange what is called barter. Some have called it "fair exchange". Quid pro quo.

**our free system of english laws** for those beginning to see the vision of sovereign liberty entering the economy know that it is a free system similarly as the unanimous declaration of the thirteen united states references our free system of english laws. The liberty blockchain is a free system and not under the dictates of any private authority it is fully republican and free which should appeal to a certain

Virginia. By intelligent-design the liberty blockchain is a free ledger system of economy.

The design of the economic plan is three-fold. First a natural quid pro quo barter as anybody naturally exchanges this for that. Next is a blockchain ledger system as bitcoin or ethereum uses. In contrast with ethereum blockchain there are no "smart contracts"; in the Liberty blockchain it only serves as ledger for freedom of exchange. And for the third unfolding of my plan is the copper sovereign liberty coin. The coin needs to be inscribed, pressed and stamped that the user knows it applies to this sovereign liberty plan. Some may have had the experience of visiting an amusement park and before leaving pressing a penny through a press which inscribes the penny with the name or logo of the amusement park, when one looks at the souveigneur it brings to mind the experience had of the amusement park now in my plan the inscription is important because it shall bring to mind the knowledge of this plan mostly the meaning of money. I have a strong recommendation the inscription shall be simply the word LIBERTY which is a word which means "by It's all much simpler than imagined.

AmericA When I speak of America I am speaking of an order founded in 1776 and continuing until about Abraham Lincoln. Notice the capitalization of last A for the purpose of reemphasising the word which has lost it's meaning in everyday modern speaking. It's similar to that Wikipedia logo. The Charters of Freedom: The Declaration, Articles, Constitution and finally the Bill of Rights are essentially the definition of the true American order.

## **America's denunciation of the federal reserve note**

about denunciation of federal reserve note. America has by the form of government denounced the note by way of denouncing the federal reserve bank thus system and note. The denunciation of the federal reserve bank is found in Journal of Congress of America here

The Congress is in recess.

**double-entry accounting** You may be asking: What is double-entry accounting? Double-entry bookkeeping, also known as, double-entry accounting, is a method of bookkeeping that relies on a two-sided accounting entry to maintain financial information. Every entry to an account requires a corresponding and opposite entry to a different account. The double-entry system has two equal and corresponding sides known as debit and credit. A transaction in double-entry bookkeeping always affects at least two accounts, always includes at least one debit and one credit, and always has total debits and total credits that are equal. (Wikipedia)

more on the copper sovereign liberty coin: If any state abide in My Union it can issue the coin and regulate the value thereof however the same can be done without a state by an association and in the republican sense all of the formulation is to be public record anyway, so it doesnt make much difference if the Copper Sovereign Coin is issued without a state except where states (systems) delude reality a state issuer then has a negative impact.

**specific software or accounting technology** of the Copper Sovereign Liberty Coin: Be all ears for a moment. In summary a quid pro quo system is used with the option of copper. GNUcash is the apex of accounting I need to explain how when a copper coin exchange is used it creates an imbalance in the double ledger system. Further the copper coin is both money and currency I have explained these attributes. The most important part of the economic plan is that the participants freePeople know what is going on. The biggest difficulty foreseen is lack of awareness and another obstacle is the inflated prices of bullion sales which in affect compete with the regulated value which could force the coin into a currency-only attribute. Another specific about how to do the ledger accounting is to take a look at the contracted exchange software Ethereum. (ethereum.org) When the economic plan is ready for release it may be something like GPL for the economy. With GPL it is perfectly republican because all of the code is public record unlike the Federal Reserve System which is not-republican form of government. GPL General Public License [citation needed] preferably Public Domain. To describe the vision it's something like dropping Hammurabi's Code into economic slavery.

**How are money & currency related?** A quick search on Google shows WRONG answers. Let me explain -

Money is the value, the intrinsic worth; the price of gold; the price of rice if one were to buy something with bags of rice. Money is the attribute of value or buying power.

Currency is the exchange of value. the flow or current; which many times is not-physical and can be any imaginary

unit in-example a "dollar" USD. Currency is the attribute of motion or exchange of value and buying power.

A single physical object such as a gold coin can be both money and currency at the same time and even have two different values accordingly thus is why the founders had delegated the power to "regulate the value thereof" of coin. Unfortunately the power to regulate the value of coin is defunct.

**Afterword:** The IRC channel `##econometrics` on freenode is interesting. The word econometrics indicates a value of measuring ecosystems with mathematics. Such metrics should be integral in the Copper sovereign Liberty Coin ledger system. It seems to have been a offspring of `#mises` a support channel for the Ludwig Von Mises institute of austrian economics at [mises.org](http://mises.org): A specific school of thought referenced by a republican congressman from Texas. Most notable teaching is the 'broken window fallacy' then mises proceeds to teach in the idealism of a good window, It's intellectually there like a mathematical proof of idealism whilst we have an ecosystem under the broken window condition. The congressman is interesting because he is the rare congressman which is likely to recognize the default of contract presumed by his support of HR 1201 for Auditing the FED which if passed would bring the FED into compliance with American Law. Why else would a man with such intellectually honest rhetoric support such a bill? The alternative is some wealth gaining scheme currency speculation or something premeditated there is an addage: all politicians are corrupt.

Labels: accounting, America, barter, coin, copper, currency, double-entry accounting, economy, etherium, gnucash, gold, liberty, money, sovereign
